

# PURPINATOR® FEED CHART

PURPINATOR® can be used during the entire life cycle of your plant.

**Vegetating phases of growth (Week 1-4):** Add .5 - 1.25 mL per litre of water.

**Early bloom phase of growth (Week 5-9):** Add 1.5 - 3.75 mL per litre of water.

**Late bloom phase of growth (Week 10+):** Add 5 - 7.5 mL per litre of water.

PURPINATOR® won't burn plants when used as directed, and can be used with any growing media, hydroponic system, and nutrient program. PURPINATOR® is at the correct pH for hydroponic use.

Week	1-4	5-9	10+
Amount	.5-1.25mL	1.5-3.75mL	5-7.5mL

- PURPINATOR® can be fed as frequently as every watering
- **For deep water culture systems:** change reservoir once every 3-5 days. Maintain aeration within the reservoir when using PURPINATOR®
- Safe for use in all fertilizer injectors
- Store in a cool, dry place, away from direct sunlight
- All measurements are per litre of water
- **DO NOT** use as a foliar spray
- Purpinator is a highly concentrated fertilizer at the limit of solubility - if crystalization occurs, shake or agitate well before use
